

## Do I Need a Post-Construction Stormwater Plan?

## **Disturbed Area Worksheet**

**Disturbed Area** includes the affected area of activities that alter the existing vegetation and/or underlying soil of a site, such as clearing, grading, site preparation (e.g., excavating, grubbing, cutting, and filling), soil compaction, and movement and stockpiling of top soils.

## Impacts or Activities that are included in a disturbed area calculation:

- Areas affected by vegetation clearing
- Areas affected by timber harvest activities
- Excavation removal and/or fill
- Scalping, blading, and bulldozing
- Stockpiling
- Material storage areas
- Septic feasibility pits
- Septic drain field installation areas
- Areas disturbed by well drilling rigs
- Construction entrances, access roads and equipment pathways

**Use the following table** to estimate the disturbed area for your site. This is the total area disturbed during construction, not just the footprint of the proposed development.

Impact Area	Square Feet (ft)
Clearing/Grubbing	
Excavation or Fill	
Stockpiles & Materials	
Septic Area(s)	
Construction Entrance(s)	
Driveway & Access Roads	
Other	
TOTAL	

## No Post-Construction Stormwater Plan Required Note: It is Recommended to Retain the Services of an Engineer or Design Professional Who Can Assist with the Following Requirements:

2) A Long-Term Stormwater Operation and Maintenance Plan

3) Operation & Maintenance Agreement

1) Stormwater Quality and Quantity Management Design and Calculations
